Abstract (en)

[origin: WO2006097005A1] The invention relates to a lid ring (20') for production of a tear-off lid, whereby a hot-sealing coating (62) is only applied to the edge (68) of the dispensing opening (25). A material saving is thus possible relative to conventional full-surface application. A coating different to the hot-sealing coating can form the lid ring surface outside the hot-sealing coating.
