Abstract (en)  
[origin: WO2006097092A1] The invention relates to a rotary piston machine (1) comprising a drive part (13) and a driven part (18) that are driven by an electric motor (2), the end faces of said parts meshing in an interlocking manner in order to transport a medium. According to the invention, the drive part (13) and the driven part (18) are located in a machine housing (12) and are connected to the latter (12) to form an assembly, by means of base bearings (11, 22) of the drive parts (13, 18).
