Abstract (en)  
[origin: US2006207276A1] A refrigerated merchandiser ( 10 ) includes a cabinet ( 20 ) having a top wall ( 22 ), a lower wall ( 24 ), a rear wall ( 34 ), and side walls ( 36, 38 ) defining an interior product display space ( 100 ) housing a product ( 110 ) in a refrigerated environment for consumer selection. A refrigeration unit ( 50 ) is disposed in operative association with the interior product display space in a compartment ( 55 ) beneath the lower wall ( 24 ). A first opening in the lower wall provides an air return inlet ( 102 ) establishing a flow passage from the interior product display space ( 100 ) to the compartment ( 55 ) beneath the lower wall. A sealing member ( 58 ) is disposed between the under surface of the lower wall ( 24 ) and the upper surface of the refrigeration unit cassette ( 50 ) about the first opening; and a positioning apparatus ( 150 ) for raising the refrigeration unit cassette ( 50 ) unit into sealing relationship with the lower wall.
