Abstract (en)
[origin: EP1703342A1] The watch has a case (10) which includes a glass (12), a middle (14) and a back (16), that define a housing (18). The housing has pellets (20), surrounded by an elastomer ring, each formed of a hollow shell (22) in which a movement (24) is disposed. Each shell has hands (28) controlled by the movement, and a back (32) with pushrods (36) at the center to allow modification of the information displayed by the hands. Each hollow shell is dimensioned such that it can move freely. A grid is placed between the back (16) and the pellets, and fixed to the middle.
