Abstract (en)

[origin: WO2006094505A2] The invention relates to a cooling system for electronic devices, in particular, computers, comprising an evaporator (1), a steam distribution element, a condensation collecting element (3), a condenser (2), which is provided with several condensation pipes (6), and one lamella block (5) which is connected to the condensation pipes (6). The condensation pipes (6) are arranged in a parallel manner in relation to each other and extend in an upward manner from the steam distribution element and the condensation collecting element (3) and are closed on the upper ends thereof.
