Abstract (en)

[origin: WO2006095152A1] A multi channel child monitor unit is provided comprising a multi channel transmitter and an identifier signal generator. The identifier signal generator is controllable to generate an identifier signal for triggering adoption by a receiver unit of a channel which carries the identifier signal. The multi channel transmitter is controllable to transmit on one of a plurality of transmission channels and to transmit the generated identifier signal on that transmission channel. The identifier signal generated is modulated onto a transmission channel signal.
