Abstract (en)

A shelf for dishwasher rack includes a mobile member (2) mounted coplanar and rotatable on a carrying member (1), that also has a fixed portion on which cutlery supports (3) are formed, as well as adjustment means (4, 4a) to adjust the rotation of the mobile member (2) with respect to the carrying member (1) around a longitudinal axis (X). In this way, the flexibility of use of the rack is increased, allowing the user to optimally exploit the loading capacity thereof depending on the number of cups and/or cutlery to be placed therein. In fact, if the shelf is intended to receive cups it is possible to rotate the mobile member (2) whereby the inclined position of the cups will prevent water stagnation on the bottom of the cups, whereas in order to receive cutlery the mobile member (2) is made coplanar with the carrying member (1).
