Abstract (en)  
The bracket (10) has a round hole (1) and two slotted holes (2, 3) running parallel to each other provided for purpose of mounting and adjusting doors. The round hole is arranged between the two slotted holes. The round hole and the slotted holes are arranged on the same height to the bearing bracket. A side piece is provided, which is vertical in a mounted condition, where the round hole and the slotted holes are arranged in the side piece. An independent claim is also included for a method for arrangement of a bearing bracket.
