Abstract (en)
[origin: EP1860392A1] The present invention refers to a refrigerator having a drawer (9) of improved removability. The refrigerator according to the invention comprises first walls (2, 3, 4, 5, 6) which define a storing chamber (8) and a drawer (9) slidably received within said chamber (8), said drawer (9) comprises an internally hollow body (10) defined by second walls (12, 13, 14, 15) rising from a base (11) and a pair of gripping elements (19) movable between a first rest position and a second working position in which said elements (19) can be gripped. The refrigerator is characterised in that the gripping elements (19) are resiliently associated to said drawer (9) such that upon a sliding movement of the latter said gripping elements (19) interact with one of said first walls (2, 3, 4, 5, 6) for displacing in said first and second position.
