Abstract (en)

[origin: EP1860916A2] The device has an on/off switch for switching on and switching off of the hearing device. A rocker (1) is provided for manual adjustment of a parameter of a signal processing unit of the hearing device by actuating from a neutral position (N) into an adjusting position or another adjusting position. The on/off switch is integrated structurally into the rocker. The rocker is actuated for switching on and switching off of an additional switching position.
