Abstract (en)

[origin: WO2006087133A1] Disclosed is a suitcase or a bag (1) comprising a basis member (2) which is defined by wall elements (6a, 6b, 8, 10) and a bottom element (4), is used for accommodating utensils, and is provided with an opening (12) that can be closed by means of a cover element (14). Said cover element (14) is accommodated on the basic member (2) and can be moved from an open position into a closed position. The inventive suitcase or bag (1) is characterized in that the cover element (14) is embodied in a monolithic and intrinsically stiff manner while being movable from the closed position thereof into the open position by means of a combined swiveling and displacing movement via cooperating guiding elements (16a, 16b, 18, 20) that are disposed on the basic member (2) and the cover element (14).
