Abstract (en)

[origin: WO2006099646A2] An item of seating furniture, which can be converted into a bed, is provided with a frame (1) and with at least one trolley (2, 3) that can be stowed inside and retracted from the frame (1). The frame (1) and the chassis (2, 3) comprise, as a support for seating or lying cushions (23, 24, 25), slats (10, 10a, 10b), which are fastened on one side and which extend in the retracting direction of the chassis (2, 3) (the chassis). The slats (10, 10a, 10b) are interspaced in such a manner that the slats of the chassis (10a, 10b) (the chassis) are located between the slats (10) of the frame (1) when the chassis (2, 3) is in a stowed state (the chassis). A cover (26) for an item of furniture of this type comprises a sheet (37) and a soft layer (36) located underneath. The soft layer (36) has an elasticity that resists rolling up so that the layer (36) automatically unrolls over the lying surface after having been rolled up with the sheet (37). This results in an arrangement that is simple and comfortable to use.
