Abstract (en)
[origin: WO2006081360A2] A method of making a package for shipping an article comprises the step of attaching to a shipping container a flexible material with a cohesive on at least a portion thereof, such that a portion of the flexible material having the cohesive material can be pressed to a cohesive on a surface of at least one of another portion of a flexible material and the shipping container. Thus the flexible material is connected to the container such that the cohesive portion can be readily secured to another cohesive portion to hold an article in a desired position in the container.
