Abstract (en)

[origin: WO2006100232A1] The invention relates to a method for configuring a control device (S) and to a corresponding control device (S). The control device (S) comprises a main memory (AS) and a variant memory (V). A main data record (A) is created in accordance with an identification (K) from a base data record (B_K) that is specific to said identification (K) and a difference base data record (D) that is likewise specific to said identification (K). The main data record (A) is then transmitted to a main memory (AS) of the control device (S).
