Abstract (en)
[origin: WO2006100267A1] The invention relates to a conductor rail support with a base part (1), which has a recess for receiving a first projection (2a) of a conductor rail (2). A sliding part (3), which has a recess for receiving a second projection (2b) of the conductor rail (2), can be slid onto the base part (1) in the direction of the conductor rail (2). The sliding part (3) is, however, arrested in directions other than in the direction of the conductor rail (2). The invention provides that the base part (1) has a dovetailed projection (1a) and a guiding groove, and that a dovetailed recess in the sliding part (3) receives the dovetailed projection (1a), and the guiding groove receives a guiding pin (3a) shaped onto the sliding part (3).
