Abstract (en)  
[origin: EP1862096A2] An apparatus is described which permits products, such as containers of paint, to be stored within product holders which may be positioned proximal to each other to produce a display stand. Each product holder is provided with a device or other means to indicate a characteristic of the product within the container, such as, when the product is paint, a colour of the paint. The product holders are arranged to be stackable in a display stand so as to save space, and the combination of storing the products within the actual product display saves on retail space, whilst providing an enhanced consumer experience.
