Abstract (en)
[origin: EP1862315A2] The cartridge has a differential pressure valve (8) arranged in an ink outlet opening (4) and comprising a valve seat (9) and a valve body (15) that is movable relative to the valve seat. The valve seat has a valve opening with a circulating sealing surface (11), and a pressure spring (17) is arranged between the valve body and the ink outlet. The valve body is pressed against the sealing surface by using the pressure spring and movable against a closing pressure. The valve body is designed in a deformable manner, such that the sealing surface is movable relative to the ink outlet opening.
