Abstract (en)
The invention provides a frozen food package comprising: a. a frozen food item (102); b. a first web (103) sealing the frozen food item from the exterior environment; and c. a second web (104) at least partially sealing the first web from the exterior environment; wherein the first and second webs are transparent to visible light, are aligned thereby to permit the frozen food item to be viewed by a consumer, have a daily water vapour transmission rate less than 300 g/m² for a 25 micron thick film, are not in thermal contact and define an inter-web space occupied with one or more gases. The invention provides a solution to the tendency with prior art frozen food packaging comprising a transparent web that water vapour condenses and then freezes on the upper and exterior surface of the web thereby obscuring the view of the frozen food item to the consumer.
