Abstract (en)

[origin: EP1862597A1] Disclosed is the combination of a structural block with a facing element. The facing element is hung to the structural block for at least partially covering its longitudinal face by means of a hanger affixed to the facing element. The hanger has a tab extending from the facing element for engaging the structural block. The tab and the block are engaged by means of at least one substantially vertical post and at least one aperture for receiving the at least one substantially vertical post. The at least one substantially vertical post is part of either the tab or the structural block, while the at least one aperture is part of the other.
