Abstract (en)
[origin: EP1862623A1] The device consists of a supporting lever (3) joined to one part with a bearing bolt (4) at the other end mounted to be movable in a bearing slot (5) in the other part. A spring latching element (6) that interacts with the longitudinal slot forms a guide gap with a long side of the slot and has recesses (8) forming a shape lock in which bearing bolt openings engage in one displacement direction and indent in the other direction.
