Abstract (en)

[origin: EP1862725A2] The light has modular parts (2), which have illuminating units, particularly LEDs, and electrical contacts, where the parts are connected with each other in different rotary positions. The modular parts are formed by polyhedrons with two congruent surfaces (4). The two congruent surfaces have hook-shaped projections and circular segment recesses that are operative in a position corresponding to a covering position. The projections and the recesses are arranged at a larger radial distance from the middle of the congruent surfaces than the electrical contacts.
