Abstract (en)
[origin: EP1862871A1] The timepiece has a setting wheel (60) driven in rotation by a winding stem (22) in a setting position and meshed with a reversing wheel (94) in an engaged position. A roller (90) respectively occupies two angular positions in two rotation directions of the winding stem. Two reversing wheels (94, 96) of the roller are meshed, in the respective angular positions, with an input pinion arranged on a staff (A6) of an output pinion (78) such that a minute wheel (16) is driven in a setting direction. The input pinion is axially shifted with respect to the output pinion.
