Abstract (en)

[origin: EP1862949A2] The cassette (1) has a box-shaped housing (2) for holding an edge material (5) existing in a roller shape, and a guiding device (11) for guidance of an upper bearing of a winding (4). A releasing device (14) holds and fixes a winding end of the edge material. A coupling device (18) is provided at the housing to detect and manage the cassette, where the housing is provided with a hub (9). The guiding device is formed by a guiding roller (12). The coupling device has two coupling units (19) that are arranged at a distance from each other at the cassette.
