Abstract (en)
[origin: WO2006095098A2] The invention relates to the use of at least one non-photosynthetic, non-fructifying filamentous bacteria extract as an agent that protects and/or stimulates the activity and/or proliferation of T lymphocytic cells of the gamma-delta type (?dT cells) in a composition containing a cosmetically- or pharmaceutically-acceptable medium. The composition can be used to promote skin tissue repair, to counteract disorders relating to epidermal differentiation and proliferation resulting from a lack of sleep and to improve the appearance of hair and to limit hair loss.
