Abstract (en)

[origin: US2006191929A1] An erectable and collapsible container including a support structure formed by a bottom wall and a pair of opposing end walls articulable relative to the bottom wall about respective hinges. The end walls include flexi-resilient sections connected along hinges for articulated movement of the end walls between collapsed and erected configurations. A pair of flexible opposing side walls extend between the end walls and include sections foldable about hinges during articulated movement of the end walls. A pair of opposed flexible panels extend from the side walls and define a bag-like upper portion extending from the support structure and forming a sealable opening for the container.
