Abstract (en)
[origin: WO2006099750A1] The invention relates to a liquid container for holding liquids, comprising a closed hollow body with at least one inlet/outlet opening (3). The invention is provided for holding non-carbonated liquids, and to this end, at least the sidewall (2) of the hollow body is provided with a three-dimensional honeycomb pattern (4). This three-dimensional honeycomb pattern (4) surround an energy field that it generates inside the liquid container. This energy field exerts an intensely stimulating and harmonizing effect upon the water molecules inside the liquid container.
