Abstract (en)
[origin: WO2006100289A1] The invention relates to a method for producing 2,5-dihydrofuran derivatives that are substituted in position 3 or 4, which carry a respective C₁ to C₆ alkoxy group (DHF alkoxy derivates I) in position 2 or position 5, or in both positions, or for producing 1,1,4,4-tetraalkoxy but-2-ene derivatives that are substituted in position 3 or 4, from 2-butene-1,4-diol derivatives of general formula (I), in which the groups R¹ and R² independently of one another represent hydrogen, C₁ to C₆ alkyl, C₆ to C₁₂ aryl or C₅ to C₁₂ cycloalkene or R¹ and R² together with the double bond, to which they are linked, form a C₆ to C₁₂ aryl group or a mono- or polyunsaturated C₅ to C₁₂ cycloalkyl group, or from a mixture of said 2-butene-1,4-diol derivatives and 2,5-dihydrofuran derivatives that are substituted in position 3 or 4 and carry a C₁ to C₆ alkoxy group in position 2 or 5, by electrochemical oxidation in the presence of a C₁ to C₆ monoalkyl alcohol.
