Abstract (en)
[origin: WO2006102996A1] The invention relates to a ventilation system (1) for a building, comprising a source outlet (2), which is provided with a textile, air-permeable source surface (8), which is used to feed the air that is supplied to the ventilation system (1) into a room (4) in a building, when the ventilation state (B) is active. According to the invention, the volume of the source outlet (2) can be increased, starting from an idle position (R), in which the volume of the source outlet (2) is reduced, in particular by folding, rolling or gathering and converted into the ventilation state (B), in particular by the air that streams into the source outlet (2).
