Abstract (en)  
[origin: WO2006103209A1] The invention relates to a method of constructing multimedia scenes which are intended to be reproduced on at least one terminal, comprising at least one multimedia object which can be assigned properties for controlling the behaviour thereof in said scene. According to the invention, at least one of the scenes comprises at least one object, known as the pointer object, which is assigned a pointer property such that it reacts to actions performed by a terminal user, comprising: at least one action involving the selection of an object and/or the activation of a pre-determined operation that is associated with an object; and at least one action involving the movement of the pointer object, such as to simulate the operation of a pointer on any terminal, even if the terminal is not equipped with corresponding control means.
