Abstract (en)

[origin: WO2006103177A1] The invention relates to a method for arranging object data in electronic maps. The inventive method is characterized in that a data area (D) having the coordinate data of a spatial area is provided, object data regarding objects (Pi) are associated with the coordinate data, and clustering is carried out in order to reduce the data volume. For the purpose of clustering, various, spatially independent objects (Pi) are combined to give a cluster object (C1, C2, ...).
