Abstract (en)

[origin: EP1864761A1] The hand tool device (2) has a main frame (6), in which vibrations are generated during operation. A handle has a housing (12) under the interim management of a vibration reduction facility (14) on the main housing. An adjuster (22) is provided having two adjustable positions and arranged at the side of the main housing, alternating between the positions. An interlocking connection (26) is arranged between the handle housing (12) and the main housing (6) with a flexible vibration reduction section (36) provided.
