Abstract (en)
A pedestrian or traffic barrier comprising an upright panel (11) curved away towards one side thereof in opposed end regions (19) each of which has a ground engaging foot (13) whilst a further foot (12) extends obliquely from an opposed face of the panel (11). The barrier is of one-piece moulded construction and has ballast chambers (14, 15 and 16). The feet (12 and 13) are offset with respect to a longitudinally centre line (18) of the barrier thus to avoid a trip hazard.
