Abstract (en)

[origin: EP1865128A1] The clip (3) has a support face (4) that is supported on a bottom (20) of a U shaped groove of a post. A passage (5) receives a unit that traverses the clip and the bottom of the groove. Slots permit the clip to enclose a vertical end wire and place the face in contact with the bottom. Metallic fins are spaced progressively from the support face towards an opposite face, and define a V shape whose opening is elastically deformable such that free ends of the fins cooperate with stops (10) of lateral fins (11) of grooves (1A, 1B) for temporarily anchoring the clip in the stops. An independent claim is also included for a fence constituted of panels whose ends are engaged in a groove of a post and comprising a fence panel's vertical end wire maintenance clip.
