Abstract (en)

[origin: EP1865130A1] The unlocking arrangement (13) has an electric motors drive arrangement, which is motion-coupled with a lock fitting of a window (10), a door or such. Another drive (17) is provided, on which the electric motor drive arrangement (16) is moved partly relative to an assembly device (14). The later drive comprises an actuating handle (30). The actuating handle interacts with a translation device acting on the relative movement between drive arrangement and assembly device.
