Abstract (en)  
[origin: EP1865469A1] Coin selector, of the type of coin selector consisting of a main body housing an electronic base plate and a hinged lid, in such a way that when the coins enter they collide against a flat metallic body and during their travel they encounter a series of sensors, housed between the main body and the lid, in order to measure different parameters with the aim of selecting those that are valid, in such a way that the metallic body (6) for collision of the coins on their entrance into the selector (1) presents a curvo-concave collision surface (7) extended in a flat surface and which incorporates three pairs of ferrite bodies (8, 9 and 10) and three photocells (11, 12 and 13), two photocells being arranged in relation to the central part of two pairs of ferrite bodies.
