Abstract (en)

[origin: EP1865695A1] The method involves authenticating a terminal (31) chosen from several terminals or a user of the terminal. An audio flow emitted or received by the terminals is cryptographically signed, and the signed audio flow is memorized, where the signed audio flow is a composite audio flow. Signaling information of a conversation between the terminals is cryptographically signed, and the signed signaling information are memorized. Independent claims are also included for the following: (1) a system for storing an audio flow of an conversation between terminals (2) a device for memorizing a program comprising instructions for performing an audio flow memorizing method.
