Abstract (en)

[origin: WO2006106029A1] The invention relates to a telescopic guide (1) for a furniture part that can be displaced in the body (3) of a piece of furniture, such as a drawer (9), sliding section or similar. Said guide comprises a sliding rail (2), which can be locked with the furniture part by means of a detent element (7) that can be fixed on said part, a guide rail (4), which can be fixed on the body of the piece of furniture and optionally a central rail (5), which is situated between the guide rail (4) and the sliding rail (2) and increases the sliding length. An insertion limiter (8) is situated in the front end region of the sliding rail (2), said limiter lying against the front face of the guide rail (4) or central rail (5) when the sliding rail (2) has not been fully inserted. The limiter can be pivoted out of its insertion block position by the detent element (7), whose detent lug (7b) engages in a detent cavity (2a, 2b) of the sliding rail (2). This prevents a potential faulty operation.
