Abstract (en)
[origin: DE102005009492A1] The cylindrical fixing element is split lengthwise into two identical halves (10,12). Each of them is provided with a recess (36) and an extension (32) to be engaged in order avoid sliding. A wedge element (14) with a rounded tip can be pushed between the parts (10,12). Two grooves located at the surface of the wedge element (14) facilitate the insertion of a thread or wire (60,62) to be used for pulling the element (14) into position.
