Abstract (en)  
[origin: EP1709989A1] The storage container (50) is connected over a feed channel (54) flown into the needle channel (32) for moistening the needle with the skin irritator and comprises a dosing equipment (60) for delivery of a drop and/or continuous or discontinuous delivery of the irritator. The dosing equipment has a delivery piston in its outer contour axially directed towards to the inner contour of the storage container and the feed channel. The feed and the needle channels include an angle of 50-60[deg]. The storage container and the tip body (28) are connected together over a prop/or a bar. The storage container, the tip body, the prop and the feed channel are formed by injection molding. The tip body exhibits a bayonet fixing for attaching the tattoo pistols and an elastic connecting body (38), which has opening and connected with a needle for frictionally connecting a movement element (40) of the tattoo pistols. An independent claim is included for device for removing a tattoo of a human or animal skin.
