Abstract (en)
[origin: WO2006106063A1] The infant seat (1) comprises a rotatable handle (2) about the rest of the seat (1) which can be steadily placed in a plurality of positions, characterised in that the seat comprises automatic returning means (7, 8) of said handle (2) to one of said steady positions. Said automatic returning means of the handle to one of said steady positions comprises elastic means (7) comprising at least a spring (7) integral with the seat (1) linked to a body (8) integral with the handle (2), so that said spring (7) tends to push said body (8) to a position where the spring (7) is extended, so that the handle (2) is placed in one of said steady positions. It permits the handle to return automatically to one of said steady positions.
