Abstract (en)

[origin: DE102005015237A1] The seat has a frame (1) holding the seat area and a backrest (5) to be reclined if so wished. A small table is connected to the frame (3) holding the backrest (5) and can be folded close to the backrest (5) when not in use. The table has two lateral arms (9), each of them provided with a longitudinal slot (13) and a flat element with a curved upper edge (15) serving as a guiding arrangement. A transversally positioned bar (7) is pushed through the slots (13), facilitating the swivel motion of the table as well as an adjusting of its position when the backrest (5) is moved.
