Abstract (en)

[origin: US2009044469A1] The invention relates to a device for fastening termination strips, in particular skirting, wall termination strips or the like, comprising an angle profile which bears against the wall and/or floor and which has a fastening part in the form of a receiving finger onto which the termination strip can be fitted and held with a clamping fit, it is intended to simplify manufacture, make adaptation to variable floors possible and allow retrofitting by proposing that the receiving finger is a web which is notched out of the floor leg of the angle profile situated on the floor and which is formed upwards in a curve, this web extending in a straight and at an acute angle towards the wall leg of the angle profile and engaging in a longitudinal groove made in the bottom of the termination strip, in which groove the curve of the web presses against the outwardly directed lower wall of the longitudinal groove and the upper endpiece of the receiving finger presses against the inwardly directed wall of the longitudinal groove.
