Abstract (en)

[origin: WO2006105754A1] The invention relates to a method and a device for automatic route registration, especially for use in a toll system. The invention also relates to a route analysis device, especially for use in a device for automatic route registration. The aim of the invention is to provide road users with inexpensive onboard units for vehicles and to facilitate registration especially for toll routes. For this purpose, a planned route can be automatically registered in a central device without the client having to do something. An automatic registration of routes is carried out especially when a new route has to be determined once a vehicle has left the originally planned route.
