Abstract (en)

[origin: WO2006102857A1] The invention relates to a method and to a system for incorporating audioclips during a conversation between a calling subscriber A and at least one called subscriber B, wherein a desired audio clip is incorporated into the conversation of at least one of the subscribers A or B by pressing a key on the telecommunication terminal thereof (2a; 2b). According to the invention, a VFS server (3) which is integrated into a telecommunication network (1) is called up by subscriber A, such that a connection (V1) is established between the subscriber (A) and the VFS-server (3), the telephone number of the subscriber B is transmitted to the VFS server from subscriber A, wherein a connection (V2) between the VFS server (3) and the subscriber B is produced, the connections V1 and V2 are interconnected by VFS-Server (3) such that the voice communication between subscriber A and subscriber B is possible, at least the connection V1 on DTMF tones selected by the telecommunication terminal (3) by the associated subscriber A is monitored by the VFS-Server (3) such that an associated audio clip is incorporated into the conversation between subscriber A and subscriber B according to known DTMF-Ton according to a cross-linking during a VFS-Server (3).
