Abstract (en)
The device (1) has reservoirs (2, 3) containing compositions (P, P') e.g. make-up composition, to be applied on a human body. A product application surface (5) is defined by a flocked wall (6), and traversed by distribution orifices (7, 8) communicating with the reservoirs, respectively. The wall is placed inside a support maintaining the reservoirs fixed with respect to each other. The wall is made of a flexible material. The orifices are grouped in sets provided in respective halves of the surface. The orifices are spaced from each other by a distance of more than 1 cm on the surface. An independent claim is also included for a method for cosmetic treatment by using a packaging and distribution device.

Abstract (fr)
La présente invention concerne un dispositif (1) de conditionnement et de distribution, comportant : - au moins deux réservoirs contenant deux compositions différentes (P ; P'), à appliquer sur le corps humain, - une surface d'application (5) du produit au moins partiellement floquée et sur laquelle débouchent au moins deux orifices de distribution distincts (7 ; 8), alimentés respectivement par les premier et deuxième réservoirs.
