Abstract (en)
[origin: EP1867469A1] The machine has a frame (12) which mounts a tappet (20) linearly driven in a stroke direction, contains a drive device driving the tappet to a to-and-fro motion. The tappet is mounted by using multiple control devices which have a guide rail (45,46) on which a guidance body (64) is placed. The guide rails stationary connected with the tappet and the guidance bodies are stationary connected with the frame. The guide rails are longer than the tappet. The guide rails protrude on the upper side and the lower side above the tappet.
