Abstract (en)
[origin: EP1867572A1] The container (1) has an inlet and outlet connection (5) closable with a cover and has a base (7) with a floor space, on which the container stays independently particularly in the filling condition. A nozzle is placed externally at the container which is opposite to a suspension device (12). The suspension device is arranged at the base in a region (10), which is relegated towards inside opposite to a support surface which is defined by the floor space and does not protrude over the support surface and the relegated region of the base is located in middle or central to the support surface.
