Abstract (en)

The packing (1) has a plane packing support (2), on which an article e.g. ring (10), is placed into a recess (3) that corresponds to an outer contour of the article. The plane packing support is flexibly arranged in such a manner that the plane packing support is deformable under effect of pressure for forming the recess from a starting position to a receiving position, where the recess remains durable after removal of the pressure. The packing support is formed from a netting of wires, where the recess is formed while placing the article on the packing support.
