Abstract (en)

A contactor has two contact elements (1, 2) each having a contact member (11, 12) adapted to bear against the contact member of the other contact element for enabling an electric current to flow between the two contact elements. Means are arranged for moving a movable (2) of the contact elements with contact member apart from and into contact with a contact member (11) of the other contact element being fixed. The contact member (12) of the movable contact element is made of a hard contact material having a hardness HV above 70 and the contact member (11) of the fixed contact element is made of a soft contact material having a hardness HV below 30.
