Abstract (en)

[origin: FR2882283A1] The procedure for making the rotary part of an axle comprising a hub (1), bearing (2) and carrier arm (3) includes at least one hub machining stage to produce a thrust surface (11) for the brake disc that lies perpendicular to the bearing axis. The machining stage is carried out with the sub-assembly held under axial tension, and the thrust face is rotated about the bearing axis during machining.
